Bland−Altman: ensemble vs observation fits (KNMI)
Solid red = mean bias; dashed red = 95% limits of agreement (mean +/− 1.96 SD).
Clayton
bias = 0.523
+/− 1.96 SD = [−0.644, 1.690]
Frank
bias = 1.549
+/− 1.96 SD = [−1.624, 4.721]
Gumbel
bias = 0.244
+/− 1.96 SD = [−0.325, 0.813]
$\theta_{ens} - \theta_{obs}$
$(\theta_{obs} + \theta_{ens})/2$
